Waity Bldg. 74 S. King St.

Hawaii's 1910 Floral Parade Plans Booming

Acting Secretary Will J. Cooper of the Promotion Committee writes an interesting weekly letter in which the big 1910 Floral Parade is the feature. The letter says:

Honolulu, Oct. 14, 1909.
Chairman and Members of the Hawaii Promotion Committee.
Gentlemen:—By this time our 1910 Floral Parade is being extensively advertised throughout Europe, and the striking posters have probably by now reached our representative in San Francisco, from which point they will be distributed throughout the United States. A letter from Harry Mott, the designer of the poster, received by the Honolulu mail this week, brings this information. Under date of September 18th, he writes:

"All the work is now ready for shipment, but there is no opportunity of shipping it via Puerto de Mexico before the 28th inst. when it will be shipped. * * * I am sending as you directed, however, advance consignments as follows: To Will J. Cooper, Seattle, by parcels post, 50 posters, 200 post cards, and 500 stickers; to Walter Scott, San Francisco, by express, 50 posters, 50 post cards, and 100 stickers; to you, c/o Thos. Cook, Hongkong, 50 posters, 250 post cards, 20 posters (1/4 size), and 500 stickers. I am keeping here 800 posters, 50 posters (1/4 size), 600 post cards, and 600 stickers. On the list you sent me, something over 700 posters are required, and I shall need between 50 and 100 copies for continental newspapers, travel agencies, banks, etc. All of the balance will be sent to Walter Scott in San Francisco, as per your directions."

I would again remind you that a director has not been named to take the management of the parade, and that this matter should not be delayed longer than absolutely necessary. I believe that conditions are most auspicious for next year's Parade, from the fact that our citizens are now better realizing that this event is a great asset and especially is this true of the business men who profit directly by the advertising which this event gives to Hawaii all over the world. We have had a notable example during the past week in what "team work" can do. In the Y. M. C. A. building project, and this should help us through example in getting "Honolulu United" in working for Hawaii in an equally broad and profitable manner. Our last mail has been extremely satisfactory in showing the interest which has been aroused throughout the world by our efforts. An editorial recently published in the Louisville (Ky.) Courier-Journal on promotion

work, cited as one of the most conspicuous examples of efficient organization in this line the Hawaii Promotion Committee. This important paper knows of us only through our work, and such mention is extremely encouraging.

Another inquiry concerning the opportunity for the establishment of a large fashionable sanatorium was also received by this mail. The writer is the secretary of a large institution of this kind in Pennsylvania, and he says: "Your letter to Dr. R. D. Worrall, with whom I am connected, has aroused my curiosity. * * * I would like to have your illustrated folders giving full particulars as to the population, business facilities, rental for private homes furnished and unfurnished."

The usual number of inquiries come from persons who seek employment, or would like to go into some line of agricultural work. A lawyer from Los Angeles, would like to come here to practice. A fresco and scenic artist from Iowa wants to spend some time in Hawaii for the purpose of studying the coloring of tropical plants and tropical scenery. A graduate of the Massachusetts Institute of Technology, and Electrical Engineer, with some capital, wishes to locate here.

The enforced suspension of our news sheet suspension of our news sheet which we formerly sent to newspapers all over the world, has been noted in many instances, and inquiries made as to the reason. Percy S. Allen, of the Auckland, New Zealand Herald, writes by the last Marama mail:

"Are you still publishing the news sheets? The last one I got came about 3 months ago. I would be glad if you would kindly continue sending these, as I personally take a great interest in Hawaii and all the islands, and I reproduce many of the articles in our paper, as from the Hawaii Promotion Committee, and will go on doing so if you will be good enough to put me on your list again."

The usual number of letters from prospective tourists are being received. To all such prospective visitors I am urging them to make their steamship reservations as early as possible, to avoid possible disappointment on account of the heavy travel Hawaiiward.

Vitold Fernando Schialo, a Polish author and newspaper writer of some note, is a visitor here at the present time, studying the conditions in the Territory. I have made some little effort to furnish him with such information as possible. He is at present visiting the Volcano, and I shall see him again on his return.

A letter just received from Mrs. Frances King Headlee, our representative in Los Angeles, indicates that good work is being done there. She states that she constantly meets persons returning from the Alaska-Yukon-Pacific Exposition, at Seattle, and they uniformly appear to have been most strongly impressed with Hawaii's exhibit. She further says:

"I certainly note an unusual interest in Hawaii and feel confident that if steamer accommodations be available, a very heavy season will be noted. * * * I have arranged a course of six half-hour lectures as per the list

Cook Charges Bribery Back of Burrill's Statement

ATLANTIC CITY, Oct. 14.—The Cook-Perry controversy has led to the reopening of the Mount McKinley discussion and the life has been passed. Tonight Dr. Cook declared the affidavit made by Elwin Burrill to the effect that he did not scale Mount McKinley as he claimed, absolutely false. In discussing the matter Cook stated that it is his belief that money may be back of Burrill's affidavit and hinted strongly that he suspects Burrill of having been paid to make the affidavit with the view to discrediting him.

The affidavit in question was sworn to at New York today by Burrill, who was one of the Cook party. In it Burrill states that the summit of Mount McKinley was never reached and says that Cook deliberately faked the data and photographs which he submitted in support of his claim that he reached the summit. He made the statement in view of the fact that Cook has laid claim to discovering the North Pole.

Washington, D. C.—If Dr. Cook actually reached the North Pole, is it possible for him to prove his achievement?

It would be easier to discover the Pole than to "fake" records to establish the claim.

That is the answer Washington scientific men give to the question the world has been asking since the announcement of Dr. Cook's success. Dr. Cook must bear the burden of proof. He, and not the world, stands a chance of being imposed upon, for it is possible that he failed to make adequate observations; but it is hardly possible, scientists say, to compile records that are not genuine which will pass muster on expert inspection.

That is why they consider speculation useless regarding the rival claims of Dr. Cook and Mr. Peary. The records will show.

Three factors enter into the method of proof that will adjudge Dr. Cook's claim.

His observations, taken with a sextant, must tally with conditions known to exist at the time he made his observations.

In case an attempt was made to "fake" a record the very accuracy of such a record would be his undoing, for certain errors that would have crept into his calculations would be missing.

A third pitfall, not of an astronomical nature, would be the difficulty of duplicating the thumb worn and dirty log book with the semblance of being compiled under conditions in which the explorer is supposed to have worked.

Professor Willis Moore, chief of the Weather Bureau, finds the last two points the greatest protection against a fraud.

Experienced Could Not Fake Log.

"If Dr. Cook was an astronomer and also an expert mathematician it would be just possible for him to compile a day to day record that might hold water. This looks to me to be a difficult task. But granting he could do this, it would be still harder to duplicate a thumb-worn log book, and the lack of errors in his account would

enclosed, and find people very much interested, and many return day after day to hear the other subjects. * * * I am working now on my different lectures, perfecting them as I can for the purpose of having them manifolded as Mr. Wood wished, to be sent throughout the East to lecturers and public speakers who would be able to use them."

Respectfully submitted,
WILL J. COOPER,
Acting Secretary.

WOMEN know! It isn't necessary to tell them that the best way, the only safe way, to wash "fancy work" is with Ivory Soap and lukewarm water.

They wouldn't think of using ordinary laundry soap, or washing powders, or chemicals.

NEVER!

Ivory Soap

99 1/100 Per Cent. Pure

server at the Pole the atmosphere would slightly increase its apparent height above the horizon. The motion of the sun in declination at that time is about 51 seconds of arc of an hour or about 20 minutes. This is equivalent to one-third of a degree a day or about two-thirds of the diameter of the sun itself.

"To an observer standing exactly at the Pole, the sun would, during the day, move around the horizon at an altitude of about 12 degrees, the height slowly increasing as the declination of the sun increases by one-third of a degree a day. If the observer were provided with a sextant and a mercurial horizon he would probably measure the altitude of the sun hour by hour and aside from the above mentioned gradual increase in the declination of the sun the altitude of the sun should remain the same, then the observer would know he was stationed at the Pole.

"In approaching the Pole, and at a distance of say sixty miles from it, the path of the sun would be somewhat inclined to the horizon; but on approaching more nearly to within 2,000 feet an approximation of the described condition would be found."

Upon Dr. Cook's ability to make these observations with benumbed hands, no facilities for conveying his instruments and most discouraging conditions for recording them, rests his claim to the discovery of the North Pole.

Invest in Honolulu Property

HONOLULU is the Commander-in-Chief of the Flagship, Oahu, of "the loveliest fleet of islands that lie anchored in any ocean." With her healthful and delightful climate, her millions in agricultural products, her millions in exports, and her millions in wealth, compared with her limited area and small population, Honolulu stands alone among all other cities of the world.

As a real estate investment, she has no parallel in history. Portland, Seattle, Spokane, San Jose and other western cities, where millions have been made in residential property within the past few years, never had the favorable conditions and assured future as exists in Honolulu today. She is the recognized beneficiary of the Panama Canal. She is destined to become the largest military post the world has ever known. She has the resources of the entire Hawaiian Islands, a territory of sixty-four hundred and forty-nine square miles, tributary to her port. She has custom receipts ranking twelfth among all American cities, exceeding by several hundred thousand dollars the receipts of Cincinnati, Cleveland, Buffalo and Pittsburg, each city with a population considerably more than double that of the entire Hawaiian Islands.

An investment in HONOLULU REAL ESTATE is as safe as Government bonds, and within a few years will result far more profitably than the best sugar stocks. This Company offers for the present **three hundred lots in the healthful, cool ocean view KAIMUKI DISTRICT** at attractive prices and liberal terms. An opportunity for young men, young ladies, newly married couples and families to make a splendid investment that will grow with the city. Call or write us for prices and further particulars.
